

MUTHAMILSELVAN V

Flutter Mobile Application Developer

Coimbatore, Tamil Nadu | +91 8220954353 | muthamilselvan251@gmail.com | linkedin.com/in/muthamilselvan251 | github.com/Muthamilselvan251

PROFESSIONAL SUMMARY

Flutter Mobile Developer with 2 years of experience shipping production-ready Android apps. Strong in GetX state management, offline-first architecture with SQLite, REST API integration, and Razorpay payment integration, with additional exposure to React Native for cross-platform fundamentals. Focused on clean, scalable code and dependable mobile performance.

TECHNICAL SKILLS

Languages	Dart, JSON, Python (Foundational)
Frameworks	Flutter SDK, Flutter, React Native (Foundational), Android Development, Mobile App Development
State Management	GetX, Reactive Programming, Dependency Injection, Routing
Storage	SQLite, Sqflite, GetStorage, SharedPreferences, Offline Storage
Networking	REST API, HTTP, API Integration, JSON Parsing
Architecture	Clean Architecture, MVVM, MVC, Feature-First, Modular Design
UI/UX	Responsive UI, Material Design, Reusable Widgets, Intermediate Figma
Tools	Git, GitHub, Android Studio, VS Code, Razorpay Payment Gateway

PROFESSIONAL EXPERIENCE

Mobile App Development Intern — TeckZy Research Analytics IT Solutions Pvt. Ltd. **March 2025 - Present**
Coimbatore

- Shipped Flutter features for an Enterprise Risk Management Android product used across multiple client organizations, contributing to a steady cadence of incremental releases.
- Built a reusable notification module (read/unread states, persistent storage, badge counters) with GetX and GetStorage, cutting down missed-update issues raised by users.
- Re-architected profile-state handling (loading, login, authenticated) with reactive GetX controllers and dependency injection, removing duplicated logic across multiple screens.
- Engineered an offline-first data layer with SQLite, Sqflite, and GetStorage, keeping core screens fully usable during network drops.
- Reduced unnecessary widget rebuilds through targeted refactors, improving UI responsiveness on lower-end Android devices.
- Integrated RESTful APIs and JSON parsing across several modules, closing data-mapping gaps with the backend team ahead of release.
- Contributed to support ticket management features, improving issue tracking and turnaround time within an enterprise mobile product.
- Built a React Native module in parallel to explore cross-platform fundamentals, gaining working knowledge of its component architecture, navigation, and native bridging.
- Supported testing, debugging, and release cycles using Git/GitHub, helping catch issues before they reached production.

PROJECTS

Healthcare Appointment App — Booking & Payments Platform

- Patient-facing app for doctor discovery, appointment booking, and schedule management, built around real-time availability and secure payments.
- Integrated the Razorpay payment gateway for secure consultation fee and appointment payments.
 - Built an offline sync layer with SQLite and GetStorage so doctor listings and bookings stay accessible without connectivity, syncing automatically once back online.
 - Designed dynamic scheduling workflows for doctor availability, rebooking, and cancellations using reactive GetX controllers that reflect slot changes in real time.
 - Delivered a responsive, Material Design UI across doctor listing, profile, and booking screens.

Tech: Flutter, Dart, GetX, Razorpay, SQLite, GetStorage, REST API, JSON, Git.

Inspection Management App — Enterprise Workflow Tool

- Enterprise mobile app supporting inspection, risk management, and support-ticket workflows for field and operations teams.
- Structured the app with a modular, feature-first architecture to keep inspection, ticketing, and reporting modules independently maintainable.
 - Implemented real-time notification badges and ticket-status tracking, improving visibility into open issues for field teams.
 - Optimized rendering of large inspection logs by reducing redundant widget rebuilds, improving list scroll performance.
 - Coordinated with backend/API teams to align data contracts for ticket and reporting modules.

Tech: Flutter, Dart, GetX, RESTful APIs, JSON, SQLite, GetStorage, Git, GitHub.

EDUCATION

Bachelor of Engineering in Electrical and Electronics Engineering — Kumaraguru College of Technology, Coimbatore **June 2020 - May 2023**

CERTIFICATIONS

- Python Full Stack Development Certificate — Elysium Academy (June 2024)
Mobile Application Development Internship Certificate — Tech Genzi (December 2024)
